SUMMARY

Software Engineer with 2+ years of professional experience in backend and database engineering, including production SQL Server development, stored procedures, and client-specific reporting systems. Experienced in investigating production issues and implementing Positive Pay, deposit accounting, and issue validation functionality. Currently building Java/Spring Boot backend engineering skills through hands-on microservices projects involving REST APIs, Kafka, Redis, and containerized deployments. Seeking a Java Backend Software Engineer role.

TECHNICAL SKILLS

- **Languages:** Java, SQL, JavaScript
- **Backend:** Spring Boot, Spring Security, REST APIs, Microservices
- **Databases:** SQL Server, PostgreSQL
- **Messaging & Caching:** Apache Kafka, Redis
- **Testing:** JUnit
- **DevOps:** Docker, Kubernetes
- **Observability:** Prometheus, Grafana, ELK

EXPERIENCE

Yardi Software India Pvt. Ltd. July 2024 – Present
Software Engineer *Pune, India*

- Investigated and resolved production backend and database issues across client systems by performing root-cause analysis on SQL Server-based workflows.
- Developed and maintained SQL Server stored procedures supporting scheduled processing and client-specific workflows.
- Created SQL scripts for client-specific reporting requirements, ensuring accurate data extraction and formatting.
- Implemented and maintained Positive Pay functionality and bank/client-specific business rules for deposit accounting and issue validation.
- Optimized SQL queries and stored procedures by analyzing execution plans and reducing unnecessary database operations, improving application response performance by 15%.

Yardi Software India Pvt. Ltd. January 2024 – June 2024
Software Engineer Intern *Pune, India*

- Supported backend and database engineering tasks, including SQL script development and initial exposure to production issue investigation.

AwesomeSuite November 2023 – January 2024
React Developer Intern *Remote*

- Built and maintained UI components using React as part of a product development team.

PROJECTS

TransactIQ – Distributed Payment Processing Platform *Personal Project*
Java 17, Spring Boot, Spring Security, Kafka, Redis, PostgreSQL, Docker, Kubernetes, Resilience4j, Prometheus, Grafana, ELK

- Designed a distributed payment-processing platform using Spring Boot microservices behind an API Gateway for centralized routing and request handling.
- Implemented JWT-based authentication and role-based access control (RBAC) with Spring Security, along with rate limiting at the gateway layer.
- Applied the Saga pattern to coordinate distributed transactions across services and used Resilience4j circuit breakers to handle downstream failures gracefully.
- Built Kafka-based event-driven processing for asynchronous transaction workflows, using Redis for caching and PostgreSQL for persistent storage.
- Containerized services with Docker and orchestrated deployments with Kubernetes; configured Prometheus, Grafana, and ELK for metrics and log monitoring.

EDUCATION

Government College of Engineering, Aurangabad July 2020 – July 2024
B.Tech in Computer Science and Engineering *CGPA: 8.16/10*

ACHIEVEMENTS & CERTIFICATIONS

- Solved 200+ data structures and algorithms problems on LeetCode and GFG.
- Participated in Hacktoberfest 2023 open-source contribution challenge.
