Summary

Backend Software Engineer with 2+ years of hands-on experience in relational database design, SQL query optimization, and performance tuning within production fintech and enterprise systems. Delivered a 30% database performance improvement and 25% reduction in query execution time by optimizing SQL queries, stored procedures, and triggers on PostgreSQL/MySQL. Comfortable operating in Linux environments, containerized deployments (Docker/Kubernetes), and distributed, high-availability system architectures. Strong analytical and troubleshooting skills with a solid foundation in data structures, algorithms, and system design (200+ problems solved on LeetCode and competitive platforms).

Technical Skills

Databases	PostgreSQL, MySQL, SQL, Stored Procedures, Triggers, Query Optimization, Indexing, Data Modeling
Systems	Linux/Unix, Docker, Kubernetes, Jenkins, CI/CD, AWS
Backend/Distributed	Java 17, Spring Boot, Microservices, Apache Kafka, Redis, REST APIs, JWT/RBAC
Observability	Prometheus, Grafana, ELK Stack
Concepts	System Design, Distributed Systems, High Availability, Multithreading, DB Performance Tuning, Caching

Experience

Yardi Software India Pvt. Ltd. — Software Engineer July 2024 – Present
Pune, India

- Optimized production SQL queries, stored procedures, and triggers on relational databases, achieving a **30% improvement in database performance** and a **25% reduction in query execution time**.
- Developed and maintained Spring Boot backend services for enterprise-scale property management applications, working directly with relational data models serving thousands of global clients.
- Built bank-specific financial data modules (Posipay configuration) covering deposit accounting, issue validation, and late-fee processing, requiring precise schema design and data-integrity controls.
- Diagnosed and resolved data and performance issues in production, collaborating with engineering teams to improve database interaction patterns.

Yardi Software India Pvt. Ltd. — SWE Intern Jan 2024 – June 2024
Pune, India

- Contributed to backend feature development and performance profiling for production Java services; participated in structured code reviews.

AwesomeSuite — React Developer Intern Nov 2023 – Jan 2024
Remote

- Built responsive React.js UI components and integrated REST APIs, collaborating cross-functionally with backend engineers.

Projects

TransactIQ *Java 17, Spring Boot, Kafka, Redis, PostgreSQL, Docker, Kubernetes*
Architected a distributed payment processing system with microservices, API Gateway, JWT/RBAC, rate limiting, and circuit breaker (Resilience4j) patterns.
Applied the Saga pattern with Kafka for distributed transaction management across PostgreSQL-backed services; built an observability stack with Prometheus, Grafana, and ELK.
Containerized and orchestrated services via Docker and Kubernetes following cloud-native, 12-factor and high-availability design principles.

Education

Government College of Engineering, Aurangabad *July 2020 – July 2024*
B.Tech in Computer Science and Engineering, CGPA: 8.16/10 *Aurangabad, Maharashtra*

Achievements & Certifications

- DSA:** Solved 200+ problems on LeetCode and other platforms (arrays, trees, graphs, DP, system design).
- Hacktoberfest 2023:** Completed open-source challenge by DigitalOcean & GitHub; contributed across global repositories.
- Certifications:** Claude Code in Action — Learning SQL Programming — HTML, CSS & JavaScript — Code Crush 2023
